\*\*GENERAL PROBLEM COMMENT BY BEN\*\*: Sun May 20 17:53:56 GMT 2012

The main dome L-bracket that hold the shutter rack onto the drive pinion slipped and got wedged in next to the rack. When I arrived this morning I found the shutter motor could spin when power was applied but the shutter would not move.

The L-bracket was removed and reinstalled on top of the rack and the dome moves properly again.

My first couple attempts at re-installing the bracket were unsuccessful because I didn't have enough force pulling both the bracket and rack down onto the pinion gear. I found that using a few straps and the block and tackle hooked to the base of the lift

I could pull down on the rack just behind the drive motor and get good contact on the gear. From here I only need to apply a small force directly to the l-bracket to get everything to snug up.

What a way to start the morning.

NOTE BY BEN: Sun May 20 18:02:53 GMT 2012

mk4 sees a strong polarization, not sure why

MKIV COMMENT BY BEN: Sun May 20 18:57:30 GMT 2012

Tried a cal to see if moving stages in/out would fix the polarization signal. but things have continued to degrade (on both mk4 and comp) so it looks like it was a sky signal

Sun May 20 23:11:02 GMT 2012 CHIP Start Patrol

NOTE BY BEN: Sun May 20 23:13:30 GMT 2012

Replaced the L-bracket and pulled down a bit harder than this morning, and now the shutter appears to move up and down properly. Once we get close to eclipse time I will just down the main dome

Just in case the shutter fails again..

\*\*COMP PROBLEM COMMENT BY BEN\*\* : Mon May 21 00:27:07 GMT 2012

For some the comp observing script was not advancing around 2:10(hst) today. I watched 3 minutes tick by with no advance in recipe; looking at the data it looks like we dropped a lot of waves data.
