MKIV PROBLEM COMMENT BY ALLEN: Sun Nov 11 00:10:34 GMT 2012

Today I looked at signals on the transformation board related to camera control and retarder rotation. All were present and the correct magnitude. There was noticeable jitter in the 1/rot and 64/rot signals but this may be normal. The HSYNCERR led is on but I believe this is a result of a change made to the HSYNC length dip switch in 2009. Changing to the pre2009 value turns the led off but does not change the camera analog output or data displays so I don't think it is related to our current problem.
