NOTE BY BEN: Thu Jan 10 18:08:03 GMT 2013

Changed shabar observing code to make the background color RED!!!! when at least one of the sensors is occulted (either by the dome or clouds). The background goes back to labview gray when the all the sensors are "happy" again.

Technically this is done by looking at the stdev of the rebinned data streams and if any of these are above a threshold (right now .04), the color is changed. This scheme has no way of telling if the lines are flat due to no light or consistent light.

So the background will stay gray if the shabar is ran while the dome shutter is closed
