MKIV COMMENT BY BEN: Wed Apr 3 18:35:15 GMT 2013

MK4 u12 was have a lot of trouble for the first hour or so this morning. Poked and prodded a few times with limited/mixed results. But as of 18:15 UT it seems to have stablized and started syncing properly.

CHIP COMMENT BY BEN: Thu Apr 4 00:36:45 GMT 2013

Installed the new pump in the Chip chiller this morning. Install went well with only a small amount of gylcol spilling. I am not sure if the tempature controller is working properly. When the controller was turned on at 12:30hst the gylcol temp was

~60degF (ambient). Since thent he temapture has slowly climbed upward. Temp now is 101degF. The chip images look good so this might not be a problem.

CHIP COMMENT BY BEN: Thu Apr 4 02:38:52 GMT 2013

Chip chiller temp stablized at 102degF. I have turned it off for tonight just incase it wasnt truly stable, we should monitor it over the comming days.
