COMP PROBLEM COMMENT BY BEN: Fri Jul 19 17:14:12 GMT 2013

COMP horizontal nsc200 cant move occulter far enough. I tried doing a manual homing but the problem remains.

CoMP COMMENT BY BEN: Fri Jul 19 18:20:43 GMT 2013
Something may have changed in the CoMP optical alignment.
With the spar guider centered and working, the CoMP occulter E-W motor did not have enough range in the positive direction to bring the occulter into alignment.
O1 and occulter stages were checked to ensure they were seated nonimally and had no obvious problems.
Problem was corrected by adding a 3mm shim to the E-W stage to bring the centered occulter into the range of the nsc200 motor.
Last year shims were added to the stage between June and August.

CoMP COMMENT BY BEN: Fri Jul 19 18:28:14 GMT 2013
Automatic occulter centering isn't working again. Looks like there is some sort of slipping when moving in the positive E-W direction. 1000 counts negative will make a nonimal occulter move 1000 counts positive is sometimes not noticeable when moving the occulter with the center occulter vi.
I have removed occulter.rcp from comp.cbk to try and get some data today.
