KCOR COMMENT BY berkey: Sat Nov  9 02:09:41 GMT 2013
Added some logic to Force the gui to poll the STOP and return button as the last major thing that happens in the main loop
.   This should speed up the exits to the program.  Before this would often get polled while waiting on socketcam, so from
 the user perspective it took the current image plus one more before exiting.  Now it should just exit at the end of this
image.
