CoMP COMMENT BY berkey: Wed Jul 9 16:39:02 GMT 2014

Looks like the horizontal occulter acuator is struggling again. It appears to have difficulty moving the occulter stage agasint gravity and is slipping. +10000 counts gives 5-10 pixel move of the occulter to the right, -2000 gives 20-30 pixels to the left.

GENERAL OBSERVATORY COMMENT BY berkey: Wed Jul 9 16:45:18 GMT 2014

Looks like we are above enough of the cirrus to start observing now.

GENERAL OBSERVATORY COMMENT BY berkey: Wed Jul 9 17:29:30 GMT 2014

gong shows a lot of activity this morning. Large eruption moving east across the sun likely launched from sunspot group 2111 1-2 hours before sunrise hst. Another eruption appears to launch from sunspot 2110 at about 16:40UT heading west. We also see small scale flaring from most of active regions.
