****EVENT COMMENT BY waters**** : Sat Sep 27 00:46:32 GMT 2014
A lot of activity going on around the limb of the Sun today, starting from this morning around 18:18UT. At between PA 165180, there is a prominence leaning to the left before the start of the day and around 19:29UT it collapses and reforms lea
ning to the right at 20:57UT. Between PA 105-115, at 20:09UT a prominence loop can be seen starting to rip the top part of
the loop. And at PA 90, lots of surges, a really nice on at 00:11UT.
