WEATHER COMMENT: waters: Sat Nov 1 16:42:36 GMT 2014

Temp 41F with windspeed at 10mph from the East. Small pockets of blue open up in the West every couple of minutes, otherwise very wet fog blowing in and clouds covering the majority of the sky. Hopefully will get better weather here soon to start the instruments. For now, the waiting game.

GENERAL OBSERVATORY COMMENT BY waters: Sat Nov 1 20:34:27 GMT 2014

Fog has cleared and most of the clouds sitting around the observatory has wafted by. However, thick cirrus is still hanging about the Sun. Hoping it thins out a bit so I can start up Pspt.
