PSPT PROBLEM COMMENT BY stueben : Thu May 21 21:50:42 GMT 2015

Pspt is working again - but I'm not sure why. I bypassed the running startup from the pspt menu and instead did the startup manually, individually homing axes. I then ran the center sun routine which after a few tries ran successfully (initial pointing wasn't close enough). Since center sun worked I then tried daily obs which is now running. I don't think I changed any hardware so I'm not sure why its now working.???

WEATHER COMMENT: stueben: Thu May 21 23:52:55 GMT 2015

Clouds are getting denser, still running pspt to see if it continues to operate normally.
