Observer: stueben

GENERAL OBSERVATORY COMMENT BY stueben: Sat Aug 15 20:58:41 GMT 2015

Just now able to start the log for the day, as mlsoserver took 4+ hours to do all its startup checks. Ben shutdown the computer systems last night. I don't favor shutting down the computers except in extreme cases - big winter storm, hurricane - isn't that why we have the fancy powerline surge suppression and UPSes, so we can ride out small outages and powerline transients??

WEATHER COMMENT: stueben: Sat Aug 15 21:06:11 GMT 2015

Thin/moderate cirrus when I arrived this morning now overcast with light rain, light southern breeze, temp 48F.

****GENERAL PROBLEM COMMENT BY stueben**** : Sat Aug 15 21:14:16 GMT 2015

All systems are now powered up and seem OK. Mlsosever is done with its checks. Pspt pc would not boot when I arrived, but after it warmed up it booted OK. Gong is unstowed (historically gong has only been stowed for winter storms).
