WEATHER COMMENT: waters: Sun Nov 22 17:19:56 GMT 2015

Temp 44F with windspeed at about 5mph from the Southwest. Lots of scattered cirrus covering most of the sky at present. Will wait to start Kcor.

GENERAL OBSERVATORY COMMENT BY waters: Sun Nov 22 17:21:18 GMT 2015

Guider RA error had a 3 second 300arcsecond oscillation when I got it to start tracking. After I applied some resistance to it, I was able to get it to stop. Took a bit but it stabilized.

GENERAL COMMENT BY waters: Sun Nov 22 21:12:21 GMT 2015

Thought I had a good twenty minute window to do calibrations. Unfortunately, cirrus is currently covering the Sun. Maybe I'll get another chance later.

****EVENT COMMENT BY waters**** : Mon Nov 23 01:16:54 GMT 2015

Lots of activity going on between PA 270-315 for most of the day. Most of the prominences in that area are changing quite a bit. Can be seen in H-alpha and can be seen from the start of the day.

GENERAL COMMENT BY waters: Mon Nov 23 02:21:26 GMT 2015

Used the new log gui a bit today. It was a bit hard for me to remember to change the log type before typing anything, otherwise it'd wipe what you just wrote. I'll have to try it a bit more later this week to see how start up goes and if i can get use to it.
