GENERAL COMMENT BY berkey: Fri Dec 11 19:15:08 GMT 2015

Winds are a bit more elevated now. We are also seeing artificially low reports from the NOAA anemometer (which is what we use to generate the automatic reports on Mikes webpage), due to it being directly in the wind shadow of the MLSO building.

Other anemometers on site are recording the 50-60mph winds (vs the 20-30 pulled by our logging system).
