\*\*GENERAL PROBLEM COMMENT BY stueben\*\* : Thu Jan 7 19:38:15 GMT 2016

Main dome door is OK to open/close - though care should be exercised as it did sustain some damage. I found a scrap of wood between the frame and the door below the bottom hinge, this appears to be what made it difficult to close and caused some damage to the door.

GENERAL COMMENT BY stueben: Fri Jan 08 00:52:13 GMT 2016

Today the contractor worked in the upper dome in the morning, installing the rubber seal at the dome base and preparing to put on the inside plywood walls. In the afternoon they mostly disassembled the old dome.
