CoMP COMMENT BY berkey: Thu May 05 02:01:26 GMT 2016

Ran CoMP software saw that all stages moved under computer control and feedback seems correct.

The observing code was edited to use the new opal motor. Focus has been demonstrated to work but not integrated into the observing code.

KCOR COMMENT BY berkey: Thu May 05 02:34:52 GMT 2016

Weird amount of the images today had lots of little bullet hole artifacts. This seems really odd since they wouldn't appear to streak in a frame but would be gone in the next. Is this a new feature ?
