CoMP COMMENT BY berkey: Mon May 16 16:41:38 GMT 2016

Looks like the CoMP O1 homed it self sometime between our work on Friday and begining of day Sunday. The optical issues G reg was seeing yesterday were caused by this.

We had been reporting the O1 postion in the fits header and too the main observing screen. But this morning I added some logic to move the O1 to 32mm (the focus position we found during the focuss test last week) during the labview system initialization.

Mon May 16 17:29:31 GMT 2016 KCOR Start Synoptic Patrol

Mon May 16 17:29:37 GMT 2016 CoMP Restarted from pause

KCOR COMMENT BY berkey: Mon May 16 17:30:39 GMT 2016

Blew off kcor field lens to try and address the spots seen in the south of the image. I assume the elevated number of spots is related to turning the closed loop hepa back on after a few weeks of leaving it off.

____end____

CoMP COMMENT BY berkey: Mon May 16 17:34:55 GMT 2016

Seeing a bring spot on the edge of the CoMP feild stop. We may have nicked some the edge during our occulter mods Friday.

____end____

GENERAL COMMENT BY berkey: Mon May 16 19:21:17 GMT 2016

We are about to take a series of CoMP flats and polarzation calibrations sequences which will involve pulling the comp optics box cover on and off and the removal and installation of various optical elements. Kcor will be run during this sequence; but there will likely be some image quaily issues while these actions take place.
