SHABAR hardware has been hooked back up to the logging laptop (/old shabar host).

Until we change the system again SHABAR should be run in the background behind the logging software when the dome is open.

Swapped out the software that takes video/images off the webcams in the dome. Hopefully this will give more robust images from the cameras. The old software seemed to crash/not start up properly fairly often. I still think we may have some issues with the hardware on the sky viewing camera. It periodically has a driver glitch that seems to require rebooting of the computer to reconnect.

Weather remains crummy. Started getting foggy around 8:30hst and has remained wet/foggy since :(
