Year: 17 Doy: 057

Observer: waters

WEATHER COMMENT: waters: Sun Feb 26 17:04:11 GMT 2017

Temp 38F with windspeed at about 10mph from the Southwest. The sky is completely overcast today. Will wait for the sky to clear before opening up.

GENERAL OBSERVATORY COMMENT BY waters: Sun Feb 26 23:26:13 GMT 2017

Every once in a while there is a misting of baby hail that comes down. However, the is blue sky starting to reveal itself to the Northwest. I'm hopeful that the clouds will pass today but we will see.

GENERAL OBSERVATORY COMMENT BY waters: Mon Feb 27 02:15:09 GMT 2017

The clouds were ever so promising to clear with the band of blue just to the Northwest but in the end, they did not clear up.

GENERAL OBSERVATORY COMMENT BY waters: Mon Feb 27 02:19:17 GMT 2017

Worked on the instrumentation/operations manual for a good chunk of time. Had a bit of trouble with getting images into google drive but after trouble shooting, was able to get them in. Also updated sections of it and rearranged parts of it as well as edited some very odd sentences. Lots of work to still do on it but getting there.
