
Mauna Loa Solar Observatory Observer's Log

Fri Jun 30 16:06:25 GMT 2017

Year: 17 Doy: 181

Observer: waters

WEATHER COMMENT: waters: Fri Jun 30 16:06:29 GMT 2017

Temp 46F with windspeed at about 6-11mph from the South-Southeast. Some cirrus on the Eastern horizon and scattered across the sky. Once the Sun is above the cirrus, I think we'll have a good amount of time for data, but we'll see how it goes.

KCOR COMMENT BY waters: Fri Jun 30 19:28:45 GMT 2017

Unfortunately, the sky was too bright to take any data before Ben cleaned the K-Cor O1 and the field lens. They have both been cleaned. However, the sky is still too bright to take any data yet.

GENERAL OBSERVATORY COMMENT BY waters: Sat Jul 1 01:28:35 GMT 2017

Alas, the sky only got worse, thicker cirrus came up and so no data today. Hoping tomorrow's a better day.
