GENERAL COMMENT BY berkey: Sat Apr 28 21:48:10 GMT 2018

PM Blew off Kcor Field Lens

Kcor fieldlens/occuter inspected to look for the source of the bright streaks seen in the nrgf images. No obvious source was seen; but during the course of the inspection a peice of lint was seen and blown off. It is not clear if the lint was on the field lens before opening the field lens cover of came in during the inspection.

Holding off on any more kcor occulter work until an inspection under full sun.
