GENERAL COMMENT BY berkey: Mon Dec 03 18:34:33 GMT 2018

Looks like shabar computer wasn't seeing the sensors this morning. (this may have been related to teh crash seen yesterday.) Pulling out and reseating the USB cable on the left side of the laptop seemed to solve this issue.

GENERAL COMMENT BY berkey: Mon Dec 03 18:55:24 GMT 2018

Seeing looks pretty good this morning ~.5-1.3 arcseconds I think this variation is mostly related to aerosols, not atmospheric seeing (but not very sure).

Because things are looking pretty good we took a few sets of Kcor streaming data.

Data were taken at 2.5ms exposure time.

Sets are called:

184832raw

184950raw

185107raw

Mon Dec 03 18:57:00 GMT 2018 KCOR ABORT Calibration Script

GENERAL COMMENT BY berkey: Mon Dec 03 18:57:07 GMT 2018

"Fat finger" bumped the calibration button when I meant to click the science button. Second calibration canceled.

GENERAL COMMENT BY berkey: Tue Dec 04 03:16:33 GMT 2018

Pulled kcor data raid data disk #6, started volume rebuild. Currently at 32%, and it is looking like it will be 4 more hours until that finishes.

Heading down will monitor from sea level.

___end___

GENERAL COMMENT BY berkey: Tue Dec 04 08:19:09 GMT 2018

Volumne initilzied and a quick test of the kcor labview/socketcam software seems to confirm the drive is properly mounted and useable.
