GENERAL COMMENT BY berkey: Thu Dec 05 01:22:33 GMT 2019

Accidentally sent the log to early today so I moved the send log button to the right hand side of the logging GUI hopefully this fixed my issue with miss clicking send log. And maybe helps everyone else, but it seems like I am the only one who makes that mistake.

GENERAL COMMENT BY berkey: Thu Dec 05 01:25:04 GMT 2019

Computing rack reconfigured.

Dusk installed and powered up.

Kodiak now properly moves in and out of the rack on its rails. previously it got stuck and was very hard to move once it was as most of the way pushed in.

Hale and mlsoserver were powered down and not re-installed. If they are needed for one last scripts or something the systems can be found along with iwii can found on the filing cabinets behind the racks.

GENERAL COMMENT BY berkey: Thu Dec 05 01:27:21 GMT 2019

Worked with Travis this morning to configure the remote access on the UPS and CDU's. Looks like are are accessible and talking expect USP2 we ran out of time to get that configured and it seems like we will need to reboot the ups at least once; so that will be another cloudy day task.
