****GPS PROBLEM COMMENT BY berkey**** : Mon Jul 27 16:53:28 GMT 2020

Cases gps system had a problem at some point this weekend. The computer lost track of its disk mount and couldn't write data. It looks like powercycling the box fixed the mount problem, but it lost its date again, so this had to be manually re set back to the current date.

I am not sure what the underling issue was to cause the mount and date failures.

GENERAL COMMENT BY berkey: Mon Jul 27 20:44:06 GMT 2020

Looks like kcor modulator and and issue around the time we did the calibration. We see good coronal data before ~18:30UT but data were bad until 20:37Ut when the observing code was stopped and restarted. At this point we are not sure if the cals were taken in the bad state of this was triggered after the cals finished.

GENERAL COMMENT BY mcotter: Tue Jul 28 02:43:51 GMT 2020

Clear blue skies and very bright all day long. Gusty winds out of the South, South East all of day. Closed lower dome shutter door mid-day to help prevent wind shaking of telescope.
