GENERAL COMMENT BY lisapg: Wed Aug 26 18:09:07 GMT 2020

PM Blew off Kcor Field Lens to try and address the two artifacts in the Northwest and Southwest.

____end____

GENERAL COMMENT BY lisapg: Wed Aug 26 18:24:49 GMT 2020

Blowing off the field lens took care of the artifact in the Southwest but it doesn't seem like it budged the one in the Northwest (if that is an artifact). There was a speck of dust in the northwest of the field lens that was very stubborn and didn't get blown off.

____end____

GENERAL COMMENT BY lisapg: Wed Aug 26 19:16:44 GMT 2020

Holding off on calibrations for Kcor as it looks like there maybe some activity going on in the Northwest region.

****EVENT COMMENT BY lisapg**** : Thu Aug 27 01:20:39 GMT 2020
Between PA 305-310 there seems to be an eruptive prominence on the limb (EPL) that has been going on since observations started this morning. Can be seen in Kcor and possible GONG.

Besides dodging through clouds this afternoon and the aerosols getting a bit high, not too bad of a day to take data.
