GENERAL COMMENT BY mcotter: Sat Nov 07 18:21:26 GMT 2020
Yesterday there was a power outage and all systems were shutdown. This morning when I cam in I texted Ben to call me when
he was up so that I could restart all systems. Ben called me right back and he instructed me in how to get all the compute
rs up and running. All systems came back with no problem with the exception of the weather satellite image. I found one on
line (not the same one as before) and put it on the TV screen.

GENERAL COMMENT BY mcotter: Sat Nov 07 21:55:07 GMT 2020
Realigned occulter and re-ran Focus routine. A good parabola was gotten. Kcor running.
___end___
GENERAL COMMENT BY mcotter: Sat Nov 07 23:33:52 GMT 2020
Orographic clouds have formed on the western slope of Maunaloa and have pushed up to the summit. Clouds are forming over t
he observatory. Shutting down Kcor.
___end___
GENERAL COMMENT BY mcotter: Sat Nov 07 23:52:01 GMT 2020
Cloud coverage over the observatory and the summit has increased dramatically. Closing the dome shutter doors and windows
in case of precipitation.
___end___
GENERAL COMMENT BY mcotter: Sun Nov 08 01:39:19 GMT 2020
Clouds have retreated and the skies have cleared. Started Kcor.
___end___
GENERAL COMMENT BY mcotter: Sun Nov 08 02:06:16 GMT 2020
Realigned occulter.
___end___
GENERAL COMMENT BY mcotter: Sun Nov 08 02:08:05 GMT 2020
After aligning occulter the keyboard and mouse stopped working. I ended up power cycling the KVM computer a couple of time
s and it finally seemed to work.
___end___
GENERAL COMMENT BY mcotter: Sun Nov 08 02:11:25 GMT 2020
I was able to take about forty minutes of additional data, but unfortunately clouds are beginning to form on the western s
lope of Maunaloa and obscuring our view of the Sun. I have stopped Kcor, but will continue to keep the dome open in case i
t clears again.
___end___
GENERAL COMMENT BY mcotter: Sun Nov 08 02:30:38 GMT 2020
Clouds are increasing to the west and north. The clouds to the north are moving in rapidly toward the observatory. Shuttin
g down kcor and closing up dome.
___end___
GENERAL COMMENT BY mcotter: Sun Nov 08 02:37:51 GMT 2020
Overall decent day of observing. Collected data most of the morning. Clouds began forming late morning early afternoon and
 needed to pause and close the dome until later in the afternoon when the clouds diminished. Additional data was taken in
the late afternoon.
