PM Blew off Kcor 01

____end____

Thu Dec 24 18:04:19 GMT 2020 Kcor Focus/alignment program exited

GENERAL COMMENT BY mcotter: Thu Dec 24 18:10:03 GMT 2020

While running the Focus routine I could see a very noticeable artifact in the 5:00 o'clock position of the image. I tried blowing off the Kcor 01 again but it made no difference. While inspecting the lens I could see a noticeable artifact on the back side of the lens at about the 5:00 o'clock position; I am unsure if this is the same artifact I am seeing in the Focus routine.

GENERAL COMMENT BY mcotter: Thu Dec 24 23:33:17 GMT 2020

The Kilauea Volcano is pumping a lot of ash and crud into the sky. The air below the inversion layer is so dark and grey that I cannot see Hualalai or the Kohala Coast.

____end____

GENERAL COMMENT BY mcotter: Fri Dec 25 00:12:06 GMT 2020

Sky was relatively clear this morning, but aerosols could be seen in images. Aerosols have increased during the day and the sky is getting hazy. I think that the eruption of Kilauea Volcano has put a lot of particles in the air as it is very vi

sible when looking out across the valley. Kcor image quality has degraded over the course of the day.
