Year: 21 Doy: 052

Observer: lisapg

WEATHER COMMENT: lisapg: Sun Feb 21 17:18:39 GMT 2021

Temp: 34.9f with windspeed at about 9-14mph from the South-Southwest. Cirrus covering the Northern half of the sky but it looks like I may be able to take data as soon as we're above the dome.

GENERAL COMMENT BY lisapg: Sun Feb 21 17:33:20 GMT 2021

Gate input pad to the site was malfunctioning when I came in this morning. Seems like one of the buttons got stuck under the plastic and once it was out, I had to cycle the power for the pad to clear the malfunction. Seems to be working now.
