KCOR COMMENT BY lisapg: Fri Apr 23 17:40:37 GMT 2021

PM Blew off Kcor O1

It appears the bullet holes are coming from artifacts on the back side of the O1. Those seemed to be the obvious culprits and blowing off the O1 again didn't help.

GENERAL COMMENT BY lisapg: Fri Apr 23 18:35:05 GMT 2021

Going to hold off calibrations as it looks like there may be some movement in the Northwest of the limb.

KCOR COMMENT BY lisapg: Fri Apr 23 22:21:11 GMT 2021

There seems to be a gap in NRGFs between 20:50:05 UT and 21:34:04 UT and during that time, it seems like the polarization shifted.

Stopping and restarted Kcor in the correct state to see if that remedies the issue.

Between PA 170-310, it seems that a prominence on the limb is expanding as throughout the day. Can be seen at the start of taking data in Kcor.

GENERAL COMMENT BY lisapg: Sat Apr 24 01:39:47 GMT 2021

The cloud that has come in looked really low, closed the dome just in case.
