Running ucomp foucs tests. We had a couple of false starts where the cover didnt come
out of the beam properly. Proper data looks like it started the 17:10 dark. So far I d
ont see any solar disk in the 530 16 sum data. Not sure if this is due to some issue w
ith something in the beam or just the faint nature of the 530 data.
UCoMP COMMENT BY berkey: Wed Mar 16 17:19:42 GMT 2022
Occulter was in teh beam for almost all of the 530 data. Continuing on to 637 and we w
ill re-run 530 after the other wavelengths.
GENERAL COMMENT BY lisapg: Wed Mar 16 17:30:35 GMT 2022
Sky just a bit too bright for Kcor at present. Waiting for better conditions before sta
rting up.

Sky above is clear, however there is a low cloud churning just to the West of the obser
vatory that is making it's way East. Holding off opening.
