
Mauna Loa Solar Observatory Observer's Log

Mon Apr 18 16:31:07 GMT 2022

Year: 22 Doy: 108

Observer: mlso

WEATHER COMMENT: mcotter: Mon Apr 18 16:38:30 GMT 2022

Temp: 33.8f, Humidity: 83%, Pressure: 28.839in, Wind: 3mph from 180degs, Skies: Gray overcast skies with Cirrostratus and high altitude Cirrus clouds covering much of the sky. Altocumulus clouds in the Saddle Valley, along with mist and fog up to approximately 7000' elevation. The road was covered with ice and frost above approximately 9000' elevation to the science center. Very frosty conditions with ice at the observatory. Snow and ice covering the summits of Maunaloa and Maunakea.

WEATHER COMMENT: mcotter: Mon Apr 18 19:10:54 GMT 2022

Temperatures are coming up slowly and the frost and ice that was present all over the grounds and walkways has begun to melt, though icy patches still remain in many places. The upper sky is completely overcast with translucent Cirrostratus clouds, with Altocumulus clouds scattered all around the mountains and shorelines of the Big Island. There is a bluish haze visible on the horizon in all directions. Winds remain light blowing from the northwest.

The dome remains closed due to poor sky conditions.

GENERAL COMMENT BY mcotter: Mon Apr 18 20:37:47 GMT 2022

Just a moment ago the UPS backup power system made a brief beeping noise and then stopped within one to two seconds. It appears we had a momentary power outage or perhaps a momentary power drop on one of the phases coming to the building.

WEATHER COMMENT: mcotter: Tue Apr 19 01:24:56 GMT 2022

It is getting really bad out with dense fog rain and sleet.

I am going to leave the premises a little early due to the poor weather conditions.

No observing today due to the poor weather and sky conditions.
