WEATHER COMMENT: mcotter: Mon Jun 06 17:12:27 GMT 2022

Temp: 48.6f, Humidity: 25%, Pressure: 28.685in, Wind: 1mph from 300degs, Skies: Clear but slightly hazy skies in all directions. The inversion layer is visible on the horizon well below Haleakala, though there is a brown colored haze visible above the inversion layer. Little to no wind at this time.

UCOMP COMMENT BY mcotter: Mon Jun 06 17:13:40 GMT 2022

Ucomp is now observing.

____end____

GENERAL COMMENT BY mcotter: Mon Jun 06 17:14:54 GMT 2022

The sky appears a little bit bright in the Kcor Synoptic images, but still acceptable.

WEATHER COMMENT: mcotter: Mon Jun 06 20:37:26 GMT 2022

The wind is increasing and is gusty at times.

The dome windows have been closed due to increased winds

WEATHER COMMENT: mcotter: Mon Jun 06 23:35:55 GMT 2022

Orographic clouds have made their way over the summit to the south and are now moving toward the viewing area. Additionally, aerosols have increased quite a bit and the Kcor NRGF and Diff images are beginning to look very grainy and blurry, though the synoptic images continue to look good.

____end____

WEATHER COMMENT: mcotter: Mon Jun 06 23:42:09 GMT 2022

The wind is gusting from the east-northeast with sustained winds at approximately 15 mph.

KCOR COMMENT BY mcotter: Tue Jun 07 00:33:01 GMT 2022

The Kcor Synoptic images are getting bright and aerosols are increasing quite a bit. The Kcor NRGF images are very grainy with aerosols, as is the Kcor Diff image. So far the clouds that came up over the summit to the south have stayed out of the viewing area.

WEATHER COMMENT: mcotter: Tue Jun 07 02:52:33 GMT 2022

Aerosols have gotten fairly heavy and the images are now getting bright.

____end____

KCOR COMMENT BY mcotter: Tue Jun 07 02:54:24 GMT 2022

The Kcor synoptic images have gotten a bit bright and the Kcor NRGF image are now very grainy and blurry.

____end____

GENERAL COMMENT BY mcotter: Tue Jun 07 03:02:07 GMT 2022

Beautiful day for observing, though aerosols started to get high in the mid afternoon.
