GENERAL COMMENT BY berkey: Thu Jul 21 17:10:02 GMT 2022

Static line (grounding line) between power pole 177 and 178 (around 11 miles up the road) blew down last night. Power to the site remained on but I suspect when crews come on site to fix this line they will bring power down to safely access the poles.

\*\*\*\*EVENT COMMENT BY berkey\*\*\*\* : Thu Jul 21 19:47:00 GMT 2022

Bright prominence eruption at PA 260 seen in kcor, launching around 17UT. Kcor pipeline tags this a cme; but at least at this point it doesn't look like material is leaving the sun.

Fri Jul 22 01:02:11 GMT 2022 UCoMP Restarted from pause

UCoMP COMMENT BY berkey: Fri Jul 22 01:12:37 GMT 2022

Found the UCoMP camera cooling radiator fan was spinning slower than expected.

Initial checks showed 12V at the fan. So a replacement was pulled from the old PSPT equipment and installed. This fan also showed slower than expected rotation.

On further inspection the negative lead on the facility side of the screw down terminal next to the fan was a little loose. Tightened this terminal restored what looked like normal rotation. However it still doesn't feel like very much flow across the radiator.

Original fan is now in the ucomp spares box in the cabinet.
