Mauna Loa Solar Observatory Observer's Log
      Sat Jul 23 16:59:05 GMT 2022
Year: 22 Doy: 204
Observer: mlso
WEATHER COMMENT: mcotter: Sat Jul 23 17:02:57 GMT 2022
Temp: 43.9f, Humidity: 13%, Pressure: 28.784in, Wind: 4mph from 194degs. Heavy fog with
 rain and mist in the Saddle Valley up to approximately 7500' elevation. Clear but hazy
 skies with a heavy brown gray inversion layer visible on the horizon just above Haleak
ala. The overall look of the sky is bright with wisps of Cirrus visible on the eastern
horizon. Very light winds out of the south.

Sat Jul 23 20:03:02 GMT 2022 UCoMP Paused for clouds
Sat Jul 23 20:03:49 GMT 2022 UCoMP Restarted from pause
Sat Jul 23 20:05:08 GMT 2022 UCoMP Paused for clouds
WEATHER COMMENT: mcotter: Sat Jul 23 20:06:17 GMT 2022
Orographic clouds have moved up from the Saddle Valley and are now in the vicinity of t
he observatory and blocking the viewing area.
The instruments have been paused due to clouds in the viewing area.
  _end_
WEATHER COMMENT: mcotter: Sat Jul 23 20:27:28 GMT 2022
The sky has quickly become totally overcast with the clouds being of a dark gray color.
The dome shutter doors and windows have been closed in case of precipitation.
WEATHER COMMENT: mcotter: Sat Jul 23 22:36:30 GMT 2022
The sky is dark gray and completely overcast with a light mist beginning to fall.
```

Sat Jul 23 23:18:45 GMT 2022 UCoMP Restarted from pause

WEATHER COMMENT: mcotter: Sat Jul 23 23:44:39 GMT 2022

Dense heavy fog has blanketed the entire science area with rain, drizzle and mist. Very limited visibility.

GENERAL COMMENT BY mcotter: Sat Jul 23 23:49:31 GMT 2022

The start of the day was a bit bright and aerosols appeared heavy, but the images looke d very good and a decent size CME was observed. By mid to late morning clouds began to make their way from the Saddle Valley up to the observatory hindering observations. By late morning early afternoon the sky was completely overcast and fog and mist covered the science area.
