****Possible CME in Progress reported by mcotter**** : Tue Sep 20 17:59:42 GMT 2022

TIME: 17:14:09 UT

PA: 110 deg

WIDTH: 20 deg

Observers report with MEDIUM confidence a CME at the time, position angle, and width noted.

This CME event was already in progress when the instruments started observing this morning. So far only a few frames of the Kcor NRGF have become available, so this is early reporting.

****Possible CME in Progress reported by mcotter**** : Tue Sep 20 21:07:24 GMT 2022

TIME: 19:20:04 UT

PA: 250 degs

WIDTH: 50 degs

Observers report with Medium confidence a CME at the time, position angle, and width noted.

This CME event was first identified in the Kcor Diff images then afterwards identified in the Kcor NRGF images. The CME appears faint in the Kcor NRGF images and it is fast moving so repeated viewing was required to adequately observe it.

GENERAL COMMENT BY mcotter: Tue Sep 20 22:05:34 GMT 2022

Worked with UH and NCAR networking groups to increase packet size across our networks.

Seems successful. Plan to try moving mlso data travel to the tunnel next week thursday.

Note we did have a brief network dropout during this work due to router rebooting.

KCOR COMMENT BY mcotter: Wed Sep 21 02:04:55 GMT 2022

PM Washed Kcor 01.

Rinsed with water and lightly cleaned with soap and water.

Initial images from NRGF show a slight fringing pattern earlier this morning that are not present post cleaning.

The Kcor 01 was cleaned independently by Marc with very little assistance from Ben.

****EVENT COMMENT BY mcotter**** : Wed Sep 21 03:13:46 GMT 2022

Today's data showed a lot of activity in the PA 90 deg vicinity. Large looping twisting images can be observed throughout the day.

___end___

GENERAL COMMENT BY mcotter: Wed Sep 21 03:15:18 GMT 2022

Excellent day of observing. Low aerosols all day with no clouds made for a lot of good data with a couple of CME's reported.
