PICS COMMENT: Sat Nov 1 19:08:43 GMT 1997

Occasionally, when the clouds thin out, I see an large prominence at PA=295,
out to about RV=1.2

COMMENT: Sat Nov 1 19:19:12 GMT 1997

David rearranged the /opt so that we can save files in our directories again,
it was too cluttered with other files and when I brought over some of my
mail from boulder it got filled up, possibly causing the 0 file length
problem. I thought the "/opt full" problem was possibly related to the
"0 file length" problem so I mentioned it in the log and e-mail, I had also
deleted some of my files to make room after finding out about the problem.
I thought the problem was due to a buildup of some kind of files but didn't
realize it was a lack of space for our personal files. There is much more space
now so this hopefully won't happen again.
