Checked out sky transmission signal to VMIVME 3125 after the passive 60-Hz filter installed yesterday and the spike is still present.

Amplitude of total signal is around 3 volts, spike drops amplitude to 1 volt for around 2 ms at around 60 Hz.

Noise is also on the input side of the filter, same frequency, same amplitude, same width.

Beautiful CME on west limb! Started around 2120 UT. Appears to have two large ascending loops or shock fronts and a third, smaller and a narrower loop ascending among the other two.

 **** EVENT COMMENT ****: Tue Oct 26 23:22:54 GMT 1999
 I did not notice any limb or disk event on PICS or CHIP until
 way after CME was in progress. May have occurred over the limb, on
 back-side. Later on limb flares appeared under CME region. What appears
 to be post-flare loops are visible on limb in PICS image now.
