WEATHER COMMENT: Thu Feb 7 17:31:29 GMT 2002

Clear sky, wind=5 mph from the South, temp=40 F.

MKIV COMMENT: Thu Feb 7 17:37:18 GMT 2002

I'm not seeing an unusually high signal like yesterday morning even though I used the heating pad over the trough last night. The corona doesn't look well defined in the scans either.

MLSO PROBLEM : Thu Feb 7 17:40:20 GMT 2002

The MCC monitor didn't get past Power Saving mode, I stopped PICS and CHIP and reset the MCC, its OK now.

MKIV COMMENT: Thu Feb 7 19:50:48 GMT 2002

The heating pad didn't help the signal today like it did yesterday, David verified this by looking at data. There are 2 different sides to the heating pad, both get warm but one side has a foam pad inside it. I put the foam pad side on the outside yesterday thinking that would help to hold heat in, but I'll try it with the pad toward the trough today - maybe that helps to conduct the heat inside the trough.

PSPT PROBLEM : Thu Feb 7 20:36:32 GMT 2002

Crashed a while ago, left it alone at Alice's request while she checked things. Got a message from Alice saying to restart. Messages on Sparc say "sun is too low... go back to bed", seriously. Avoided temptation to go back to bed. Found weird characters on PC screen and it didn't respond to pressing "Enter" key. Killed runPspt.pro, rebooted PC, tried to restart. When starting again the dome pointed too far West, the telescope followed at a quick rate, the PC had the same weird characters, the Sparc showed "centering image" and the "sun too low..." messages again.

PSPT COMMENT: Thu Feb 7 21:45:05 GMT 2002

Reinstalled old version of pspt.exe, rebooted PC, shutdown everything and restarted from scratch like a new day - to avoid the mispointing mess.
