\*\*PSPT PROBLEM\*\*: Sun Jul 18 21:14:03 GMT 2004

I checked into the dome rotation problem that Allen logged yesterday.

I greased the track that the wheels ride in for Azimuth movement.

I found a mismatched joint in the track that lines up with the center of the slot, I can't tell how it got there, I tried to hammer down the high side lip but it didn't move much since it is very thick steel. We may need to take that track section off and bend it back better. For now lets see how it works, if it slips too much to get data then shutdown and I'll look at it to figure out what to try next.
