****ECHO PROBLEM****: Wed Dec 15 20:07:29 GMT 2004

PC power supply system appears faulty. May be intermittent power switch or the supply in general. I did see it power up and then turn off while I was looking around.

PC did not appear overheated, but I cleaned the vents.

The cannibalized spare PC power supplies that

we have on hand will not fit in the ECHO PC chassis so they cannot be used to swap. Booted up PC again and restarting echosys program.
