Fri Aug 5 21:59:38 GMT 2005 MKIV Start Patrol

\*\*PSPT PROBLEM\*\*: Fri Aug 5 23:17:59 GMT 2005

Images were very vignetted around noon. Suspected shutter. Removed

shutter and tested manually with controller. Operation appeared OK.

Swapped in a spare to test.

Recentering image. Offpointed spar while removing shutter.

\_\_\_end\_\_\_

\*\*PSPT PROBLEM\*\* : Fri Aug 5 23:54:11 GMT 2005

Spare shutter images were the same vignetted images as the originals.

Replaced the original shutter into pspt and restarted observation.

\*\*PSPT PROBLEM\*\* : Sat Aug 6 01:27:10 GMT 2005

PSPT vignetting problem symptoms fixed. Shut down, exited, rebooted PC, restarted Pspt, restarted observations. Looks like some value somewhere in the program got cumulatively worse from around noon, be it the ephemeris value or an offset that affected guiding, some optical element's position was changing causing it to vignette the image, or a combination of the two. I am not sure whether the vignetting was causing poor centering and introducing offset errors to the guiding or the guiding errors were causing the vignetting.
