SBM PROBLEM : Sat Jun 23 16:33:45 GMT 2007

Boot gets to where it uncompresses Linux (...OK), then it displays "booting the kernel". No HD activity after that, program doesn't go on to boot system.

This occurs after reset, power cycling with front panel switch, and cycling power at AC plug.

Standing down until problem can be troubleshot.

Data from 6/16/2007 to 6/22/2007 has NOT been transferred to CD and archived yet.
