PSPT COMMENT: Mon Jul 9 16:31:38 GMT 2007

Startup.

____end____

PSPT PROBLEM: Mon Jul 9 16:47:06 GMT 2007

Spar wound around 2X before cables and hoses stopped progress.

PC program was still cranking away trying to rotate the RA motor.

Killed and powered down. Will troubleshoot possible RA limit switch

failure later as I have time.

PSPT PROBLEM: Mon Jul 9 21:06:15 GMT 2007

PSPT was intermittently losing its RA limit status because the ground to both W and E limit sensor was broken along the cabling near P64 connector on the spar. Wire broke between where the cable sheathing ended and the connector strain relief began. Had to jury-rig a sleeve to solder the two broken ends together. This was P64 pin 8. Also found the two shield wires at P64 pins 1 and 2 had pulled out of their crimps. Found proper tool for removing the pins from the connector, soldered the wires to the pins and pushed the pins back into the connector, again, with the proper tool. There are no spare pins, cabling, or connectors for PSPT, BTW.

Reassembled cable and fired PSPT back up.

Start-up went smoothly, with HOME guider instruction stopping smoothly before or at the limit (it's not a hard limit -- it's an opto-switch).
