MLSO PROBLEM: Wed Jan 21 19:46:05 GMT 2009

CHIP filter off-band problem as well as other problems stemmed from A3 breaker tripping sometime overnight. First indication was airbrush compressor not running. It is usually sluggish when it is cold in the morning so its failure this morning did not raise any flags -- it was 27 degrees this morning. A3 breaker controls the outlets on the dome floor, east and middle on the south side of the pier. Also plugged into the east receptacle are the Meadowlark CHIP filter controller -- hence no temperature control,>> off-band images. Also plugged into east receptacle is the AC power to the Dalsa camera heater power supply (red cable). Lack of temperature control at the Dalsa camera may have caused the 5VDC power supply failure????

Middle receptacle controlled by the A3 breaker powered the dome phone and the David Clark sound powered headphones alert annunciator.

____end____

CHIP PROBLEM: Wed Jan 21 20:08:20 GMT 2009

Off-band performance will continue until the CHIP filter reaches the correct

operating temperature and stabilizes.

___end___

CHIP PROBLEM : Wed Jan 21 21:35:42 GMT 2009

CHIP images are starting to look normal again, filter must be near or at correct temperature.
