PSPT PROBLEM COMMENT BY DARRYL:

Sun Oct 17 23:27:16 GMT 2010
I brought up the shipment of spare equipment and put it away mostly in the PSPT dome. I tried a short FO patch cable between the camera and the media converter box and confirmed that the single images using "Go" from the IDL GUI and the "Start up" programs both appeared to work correctly instead of stalling as we have seen lately. This confirms that the only problem may be a bad FO cable, the existing cable is bad at the connector. The patch cable I used is too short for normal obs so we are still down until I can find a vendor who will repair our cable and/or sell us another cable. But PSPT lives, and we have a nice supply of spares from Boulder now.
