GENERAL PROBLEM COMMENT BY BEN: Wed Mar 16 20:14:20 GMT 2011

Ulua wasnt properly mounting home directoies with autofs. A few weeks back I found some sort of work around for this but today it stopped working and I couldnt log in to ulua again.

After a bit of hair pulling I found that autofs was looking for localhost, which got inadvertently removed from the /etc/hosts files during the network upgrade.

Once it was added to the hosts file everything appears to be running very smoothly.
