GENERAL COMMENT BY berkey: Wed Jan 06 18:03:31 GMT 2016

Today we should be completely securing the main dome with the long threaded rods. And hopefully finishing out the down stairs electrical rough in.

Depending on dome progress there may be some prep/start to the flat roof replacement this/next week.

GENERAL COMMENT BY berkey: Thu Jan 07 02:15:46 GMT 2016

Dome was secured should be the strongest part of the building now.

Electric rough in progressed still a little more to go.

____end____

KCOR COMMENT BY berkey: Thu Jan 07 02:19:57 GMT 2016

Kcor 01 washed. Building was deemed too dusty so a temporary work station was setup in another building.

Spar protection was removed. And instrument appears to be operation. However images are washed out due to cirrus so no corona today.

GENERAL COMMENT BY berkey: Thu Jan 07 02:49:23 GMT 2016

Main dome door happens to have suffered a bit this week with all the extra activity.

I was unable to properly close it because the inner core has become unattached from the rest frame. I eventually got it closed and was able to secure it shut with a lot of force and a wedge. But I think we should not enter the upstairs again until a replacement door is on site.
