GENERAL PROBLEM COMMENT BY berkey : Mon Dec 18 22:07:18 GMT 2017

Matrix 5000 ups had a power hiccup and turn off its load side. This seemed to require user intervention to bring the equipment back up.

The LCD warned that the batteries are low/ need to be replaced.

After recovery the system says it has 8minutes of run time with 13% load.

GENERAL COMMENT BY berkey: Mon Dec 18 22:12:12 GMT 2017

Looking thru old emails it looks like the batteries were replaced Oct 2014.

GENERAL COMMENT BY berkey: Tue Dec 19 00:31:41 GMT 2017

Added a feature to add a list of all the people onsite to the bottom of the log. I think we should include anyone who is up here to work but probably not visitors on a tour.

For observers checking the box next to their name will include them into the list of on site staff. For others their names can be added via the "Other staff on site" text box.

This entry is appended automatically as part of the "send log" button function, which should force it to be the last thing in the log.

The entry format will be:

ONSITE STAFF: observer1, observer2,...

Such that if we had all hands on site with an important visitor we would see:

ONSITE STAFF: berkey, stueben, rose, waters, boulder big wig

GONG COMMENT BY berkey: Tue Dec 19 02:00:08 GMT 2017

Gong turret stowed.

____end____

GENERAL COMMENT BY berkey: Tue Dec 19 02:00:59 GMT 2017

No data today.

Winter weather warning 6pm tonight -> Thursday. And looking out the window this seems like an accurate forecast. Burr.
