Moved shabar over to a new laptop. However the old one is still online and available. So if we run into issues with this new system we can revert by simply moving the various cables back to the older system.

Found a spare drive that I could use to make iiii a windows10 box.

That drive is now installed with all of its updates. I believe all of the webcam and weather plotting programs have been ported over to the new system and everything seems happier now.

I am not sure if it is solid state disk or just a fresh copy of windows; but the animation movies don't seem to be crashing as much as they were over the last couple months.

If we need to revert for any reason the old OS disk is sitting on top of the box; and we should be able to revert by simply removing the new disk and reinstalling the old one.

Annoying amount of cirrus today. Only really cleared up for a couple hours.
