UCOMP COMMENT BY berkey: Wed Nov 16 22:53:48 GMT 2022

Tired to look at the Lyot spot, but cirrus was too thick to see the bright lyot ring.

We did see the bright spot that used to be at the edge of the lyot ring is now centered in the on the iris. We think this is an improvement.

R-cam baffle pulled off and the PBS exit optic along with the Rcam focal plane were blown off. The baffle was then reinstalled.

This appears to have cleaned up the spots we saw in rcam yesterday.
