Mauna Loa Solar Observatory Observer's Log Mon Apr 08 16:49:32 GMT 2024 Year: 24 Doy: 99 Observer: berkey, lisapg Eclipse day. Very cloudy 659am Arrived on site. Ben hooked up the coms link for the inverter to the battery bank . Generator didn't start up again. Hooked up a locally bought battery starter. 703am Generator started; generator faded out 704am. 708amGenerator restarted; faded out again 710am 712 am generator started and faded out immediately disconnected from the building. 720am Lisa taking chemical inventory 802am Ben taking battery down to heli pad 810am chemical inventory done. Just need to get the pictures out of the new stuff and c heck against what we had in the document. 813am Ben currently checking NOAA buildings for engine oil for the generator 821am epc arriving on site 830am engine oil found and used, Oil leak found at one of the tubing in the generator, generator restarted but failed to kick. Leak possible due to generator not level 840 leveled generator as best can, but need to watch it when on as vibration may cause it to shift. 915am waiting for bought battery starter to charge before attempting to start generator 931 trying other starters 935 swapped out battery for ladder lift battery and generator started. Seems to be hold ing at present 939am heaters have been switched on 944 am ucomp computer and monitors on 946 everything such off. Holding off everything else and waiting for the green from epc 1012 heading upstairs while they trouble shot batteries/generator/inverter 1016 generator off 1029 generator restarted 1130am done taking pictures in the dome for now 1154am did a swap of power from generator to batteries to see if they swapped. Flickeri ng of lights and we lost power to the computers briefly as well but seems liked it swap ped over? 1209pm Was at 81% now at 80%. Waiting for ucomp to shut down to swap back. Kcor up to t emp (33.2) 1237 swap back to generator (?) 136pm powered everything down and getting ready to leave
